(UNIW) UNIV WASHINGTON STATE RES FOUND.

```
The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway.

The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require not not not a considerable of the enzymes.

The secoisolariciresinol dehydrogenase in plants or to alter lignan of secoisolariciresinol dehydrogenase in plants or to alter lignan of secoisolariciresinol dehydrogenase or proteins and mucleic acids can be utilized to: elevate or otherwise atter the levels of health-protecting lignans, including phytosetrogens atter the acents of neutrodoil, in plant species, including phytosetrogeners are enterolactone and enterodiol, in plant species, including material estables, grains and fruits and to food items incorporating material derived from such genetically altered plants; genetically altered plants; genetically altered plants; genetically alter plant or a variety of purposes, for example as neutriceuticals and dietary cabured from such genetically alter living organisms to produce an example (-)-trachogenin which possesses antiviral processes antiviral contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 NSTYIHCDVINEDGVKNAVDNIVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5:9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenae in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, mateliaresinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytosetrogens such as enterolactone and enterodiol, in plant species, including charter as enterolactone and enterodiol, in plant species, including derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary a variety of purposes, for example as neutriceuticals and dietary abundant supply of optically alter living organisms to produce an abundant supply of optically place lignans whing desirable biological properties, for example (-) trachelogenin which possesses antiviral

recisolaric actors are used to obtain expression of the enrymes.

It is also used to obtain expression or chanced expression of secoisolaric resinol dehydrogenase in plants or to alter lignan biosynthesis. The enryme is used for production of the pharmacologically active lignan, matairesinol. The secoisolaric resinol dehydrogenase or cutive lignan, matairesinol. The secoisolaric resinol dehydrogenase alter the levels of health-protecting lignans, including phytoestrogens such as enterolactone and enterodiol, in plant species, including vegetables, grains and fruits and to food items incorporating material derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an properties, for example (-)-trachelogenin which possesses antiviral properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8 ARRLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDELGHSVVEAIGTSNSTYIHC 67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ARRLEGKVALITGGASGIGETTAKLFSOHGAKVAIADVODELGHSVVEAIGTSNSTYIHC 71
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                                    Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;

```
The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the ligana biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.96.85, and require weight of 27-31 kDa, an isoelectric point of 5.96.85, and require but of the secoisolariciresinol dehydrogenase in concleic acids are used for the secoisolaricresinol dehydrogenase in plants or to alter ligana secoisolariciresinol dehydrogenase in plants or to alter ligana active ligana, matairesinol The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or toherwise active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or toherwise such as enterolactons and enterodiol, in plant species, including phytoestrogens such as enterolactons and enterodiol, in plant species, including material derived from such genetically altered plants; supplements; to genetically altered plants; to produce an abundant, natural supply of liganas useful for a variety of purposes, for example as neutriceuticals and dietary supplements; for example (-) trachelogenin which possesses antiviral properties, for example (-) trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                     Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan, matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodel; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophylotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require the secoisolariciresinol dehydrogenase proteins and require to a cofactor. The secoisolaricresinol dehydrogenase in the salso used to obtain expression or enhanced expression of the enzymes. It is also used to obtain expression or enhanced expression of the enzymes. The enzyme is used for production of the pharmacologically active lignan, matairesinol dehydrogenase in plants or to alter lignan active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise context and nucleic acids can be utilized to: elevate or otherwise such as enterolactone and entercatiol in plant species, including phytosetrogenase such as enterolactone and entercatiol, in plant species, including material derived from such genetically altered plants; genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriculals and dietary supplements; to genetically alter living organisms to produce an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriculals and dietary submidgant supply of cpically pure lignans having desirable biological properties, for example (-) tranchelogenin which possesses antiviral properties, and (-) podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                   Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan, matairesinol; health-protecting lignan, phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophyllotoxin.

recoisolaricires. Outside the properties of the pharmacologically biosynthesis. The enzyme is used for production of the pharmacologically biosynthesis. The enzyme is used for production of the pharmacologically active lighan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phycoestrogens such as enterolactone and enterodiol, in plant species, including vegetables, grains and fruits and to food items incorporating material derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, for example (-)-trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isolactric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan; matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Trypsin fragment of a secoisolariciresinol dehydrogenase protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        content in seeds of a monocotyledon plant, comprising selecting at least one protein or enzyme integral to the pathway leading to G-lignan formation, stably transforming a monocotyledon plant with chimeric gene (CG) constructs having a seed-specific transcriptional regulatory region operably linked to a nucleic acid sequence encoding the enzyme. The method of the invention is useful for stably transforming a monocotyledonous plant (e.g. rice) with CG constructs resulting in increased expression of the genes encoded by CG constructs. The G-lignan enriched seed composition is useful as a food additive. This sequence represents the secoisolariciresinol dehydrogenase protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for increasing the guaiacyl (G)-lignan
                                                                                                                                                                                                                                                                 Guaiacyl (G)-lignan; monocotyledon plant; rice; food additive;
seed-specific transcriptional regulatory region; dehydrogenase; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Increasing guaiacyl-lignan content in monocotyledon plants, by transforming plant with chimeric gene construct having seed-specific transcriptional regulator linked to gene encoding protein involved in G-lignan formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12.5%; Score 34; DB 23; Length 276; 100.0%; Pred. The present sequence represents a peptide of a secoisolariciresinol dehydrogenses. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogense proteins have a molecular weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require nucleic acids are used for the secoisolariciresinol dehydrogense in plants or to alter lignan secoisolariciresinol dehydrogense in plants or to alter lignan plosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogense alter the lacvels of health-protecting lignans, including phytoestrogens are therefore and enterodiol, in plant species, including cause a enterolactone and enterodiol, in plant species, including cause and from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutricenticals and dietary supplements; to genetically alter living organisms to produce an properties, for example (-)-trachlogenin which possesses antiviral properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                                                                                                                                      The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the B-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                     Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms.

The present sequence represents a peptide of a secoisolariciresinol dehydrogensse. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogense proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require need for the recombinant expression of the enzymes. The secoisolariciresinol dehydrogense in the argumes. It is also used to obtain expression or enhanced expression of the enzymes. It is also used to obtain expression or enhanced expression of active lignan attairesinol. The secoisolariciresinol dehydrogense proteins and nucleic acids can be utilized to: elevate or otherwise active lignan, matairesinol. The secoisolariciresinol dehydrogense proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytrosetrogens cuch as enterolactone and enterodiol, in plant species, including material derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary abundant enterol of produce an abundant in an elementally alter plant of a wariety of purposes, for example as neutriceuticals and dietary abundant enterol of produce an abundant in an elementally alter plant produce an abundant in an abundant in an elementally alter plant abundant in an abundant in an abundant in a manual elements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Supprements, commentarily pure lignams having desirable biological phonoperties, for example (-) trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

```
The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABM15762 to ABM27252 encode the human ORFX proteins given in ABP00010 to ABM15000. ORFX proteins are useful for treating or preventing a pathology associated with an OFFX associated disorder in humans, and in the manufacture of a medicament for treating a spanning a pathology associated with OFFX associated disorder. ORFX polynucleotide syndrome associated with ORFX-associated disorders, or manufacture of a medicament for treating a pathology associated disorders, cirrhosis of liver, psoriasis, benign tumours keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, cirrhosis of liver, psoriasis, benign tumours keloid, degenerative disorders, indesteed to organ transplantation, cardiovascular disorders, disorders, infectious disease, autoimmune disorders such as multiple sclerosis, rheumatoid disease, autoimmune disorders such as multiple sclerosis, rheumatoid disease and autoimmune thyroidits, mysathenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating of sorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, to reperfusion injury in various tissues and conditions resulting from systemic cataler deat for this patent disorders.

"Analysis of the Bacillus subtilis genome: cloning and nucleotide
sequence of a 62 kb region between 275 degrees (rrnB) and 284 degrees
regulation map for Bacillus subtilis.";
Electrophoresis 18:1451-1463(1997).
-!- INDUCTION: BY HEAT SHOCK, SALT STRESS, OXIDATIVE STRESS, GLUCOSE LIMITATION AND OXYGEN LIMITATION.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases (SDR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Huelsameyer M., Hecht H.-J., Niefind K., Hofer B., Eltis L.D.,
Huelsameyer M., Schomburg D.;
"Crystal structure of cis-biphenyl-2,3-dihydrodiol-2,3-dehydrogenase
from a PCB degrader at 2.0-A resolution.";
Protein Sci. 7:1286-1298 (1998).
-!-CATALYTIC ACTYLYTY: Cis-3-phenyl-cyclohexa-3,5-diene-1,2-diol +
NAD(+) = biphenyl-2,3-diol + NADB.
-!-PATHWAY: DEGRADATION OF BIPHENYLS AND POLYCHLOROBIPHENYLS (PCB) TO
BENZOTC ACID AND CHLOROBENZOIC ACIDS; SECOND STEP.
-!-SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
(SDR) family.
-!- PATHWAY: DEGRADATION OF BIPHENYLS AND POLYCHLOROBIPHENYLS (PCB) 1
BENZOIC ACID AND CHLOROBENZOIC ACIDS; SECOND STEP.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-FEB-1996 (Rel. 33, Created)

Lett. 154:317-324(1997).
-!- CATALYTIC ACTIVITY: Cis-3-phenylcyclohexa-3,5-diene-1,2-diol +
NAD(+) = biphenyl-2,3-diol + NADH.
-!- PATHWAY: DEGRADATION OF BIPHENYLS AND POLYCHLOROBIPHENYLS (PCB) T
BENZOIC ACID AND CHLOROBRIZOIC ACIDS; SECOND STEP.
-!- SUBUNIT: Homotetramer (Probable).
-!- SUBUNIT: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

"Sequence analysis of a gene cluster involved in metabolism of 2,4,5-
trichlorophenoxyacetic acid by Burkholderia cepacia AC1100.";
Appl. Environ. Microbiol. 61:1279-1289(1995).
-!- CATALYTIC ACTIVITY: 2 glutathione + NADP(+) = glutathione
disulfide + NADPH.
-!- COPACTOR: FAD.
-!- STATHWAY 2.4,5-trichlorophenoxyacetic acid degradation.
-!- STHUMY 2.2,5-trichlorophenoxyacetic acid degradation.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR ENCATION: Cytoplasmic.
-!- MISCELLARBOUG: THE ACTIVE SITE IS A REDOX-ACTIVE DISULFIDE
-!- STHALLARITY: BELONGS CLASS-I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kawamukai M.;
"S.pombe ribosomal protein L27 homolog.";
"S.pombe ribosomal protein L27 homolog.";
Submitted (JUN-1998) to the EMBL/GenBank/DDBJ databases.
--- MISCELLANEOUS: THERE ARE TWO GENES FOR L27 IN S.POMBE.
--- SIMILARITY: BELONGS TO THE L27E FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

SUBUNIT: Homodimer, disulfide-linked.
SUBCELLULAR LOCATION: Cytoplasmic.
SUBCELLULAR LOCATION: Cytoplasmic.
COMPACTMENTS BELONGING TO THE HYDODERMIS, THE DORSAL, VENTRAL AND LATERAL CORDS, THE NEWUR RING, AND BODY WALL MUSCLE.
FTM: THE N-TERMINUS IS BLOCKED.
SIMILARITY: Belongs to the globin family.
